OpenLayers: An AJAX Library for Building Mapping Applications on the Web

Friday 15 Sep 2006 at 08:30 (00h30')

OpenLayers is a BSD-licensed, pure JavaScript API for building map applications on
the Web. OpenLayers offers the ability to display a number of different types of data
(e.g. WMS, WFS, point data) in a dynamic, AJAX-driven, "slippy" mapping interface. We
will look at how to view data from OGC web services, GeoRSS feeds, ka-Map caches,
Google Maps, KML, and more in OpenLayers. We will also examine how the OpenLayers API
makes it easy to build new and slick mapping apps.

Primary authors : Mr. ERLE, Schuyler (MetaCarta, Inc) ; Mr. SCHMIDT, Christopher (MetaCarta, Inc)

Co-authors :

Presenter : Mr. ERLE, Schuyler (MetaCarta, Inc) ; Mr. SCHMIDT, Christopher (MetaCarta, Inc)

Session classification : Session 13 Development

Track classification : --not yet classified--

Type : Technical Conference
