FOSS in business processes: Reflections from a National Mapping Agency.

Thursday 14 Sep 2006 at 09:45 (00h30')

As a National Mapping Agency swisstopo produces a huge amount of geodata each year. Opensource software plays an important role in the presentation and distribution of this data. In the field of business processes we have created a set of services from automatic order handling right up to secure shop payment. These services are improving orders and deliveries and are contributing to the e-government framework.
