deegree iGeoPortal

Tuesday 12 Sep 2006 at 14:00 (03h30')

deegree iGeoPortal is the Java/JSP-based portal framework of the deegree project. Its
area of usage is buildup of Spatial Data Infrastructure (SDI) portals using a number
of OGC Web Services like WMS, WFS, WCS, CS-W and WFS-G.
The workshop gives a practical introduction to deegree2 iGeoPortal, encompassing its
configuration in regard to design and layout. The modular architecture of iGeoPortal
is explained and how these modules can be configured. The practical part of the
workshop focuses on base functionality of iGeoPortal as as "Web-GIS", acting as a WMS
client.
The second part of the workshop gives an overview of additional modules, e.g. for
Gazetteer usage or metadata search using OGC catalogue services. Besides, the
JSR-168-based deegree iGeoPortal - portlet edition is introduced.
